

ABSTRACT

Apparatus, and an associated method, for facilitating viewing of a display indicia displayed upon a user display of a portable communication device, such as a cellular mobile station. An optical lens that exhibits a selected magnification level is positioned to overlay the user display. A mounting arm engages with the optical lens and with the portable communication device to affix the optical lens so that when the user of the communication device views the user display, the display indicia displayed thereon is magnified by the optical lens.
